

## Corrigendum

## Corrigendum to “Priorities to inform research on marine plastic pollution in Southeast Asia” [Sci. Total Environ. volume 841 (2022) Article 156704]

The authors regret that the printed version of the above article contained a number of errors. The correct and final version follows. The authors would like to apologise for any inconvenience caused.

The edits to Fig. 4 are as follow:

- The scale of the ‘Annual River Emissions’ scatter was one order of magnitude off due to scaling the scatter down to an appropriate size.

- The unit of measurement of the ‘National Riverine Plastic Emissions’ is tonnes per year.

**Declaration of competing interest**

The authors declare that they have no known competing financial interests or personal relationships that could have appeared to influence the work reported in this paper.

**Fig. 4.** Map of Southeast Asia showing the principal ocean currents of the region and plastic emissions per country and river. The chloropleth map represents total plastic emitted into the ocean (tonnes per year), while the scatter plot (orange) shows the geospatial distribution of the relative individual river emissions (tonnes per year). Global surface warm ocean currents are represented by the thick red arrows. Regional surface currents of the Indonesia Through Flow affecting the dispersal of marine plastic litter are represented with thin grey arrows. Data on plastic emissions from Meijer et al. (2021).
